

Diabetes and Complications -

For people who have diabetes

(Part 3 of a 3 Part Series)

Satellite Conference & Live Webcast

Tuesday, November 8, 2005 • 2:00-4:00 p.m. (Central Time)
3:00-5:00 p.m. (Eastern Time) • 1:00-3:00 p.m. (Mountain Time) • 12:00-2:00 p.m. (Pacific Time)

Diabetes Mellitus is a disease that can cause complications throughout the body. This session will explain the complications that most commonly occur, how you can recognize them at the earliest stages and how they can be treated. Early recognition leads to better outcomes. With good management of your diabetes, many of these complications can be delayed or avoided altogether.

Some of the complications of diabetes, like tingling in your feet or increased urination at night, are easy to notice. Other complications are not obvious, such as glaucoma and high blood pressure. It is a good approach to have a list of potential problems to talk about with your doctor when you have a doctor's appointment. This program will help you to know more about possible problems and complications and bring you news about the latest new developments in keeping diabetes under control.

Faculty:

Dennis Pillion, PhD
University of Alabama at Birmingham School of Medicine

Dr. Pillion is the Director of Staff Education and Past Chairman of the Board of Directors for Alabama's Camp for Children with Diabetes; President of the American Diabetes Association; Birmingham Leadership Council; and Co-founder of the Diabetes Care Network of Alabama, which is a non-profit company in Birmingham, Alabama, involved in delivering diabetes education to employees in the workplace setting.
